## MIOT: On the frontline of medicine

In 1999 MIOT Hospitals went from being an ideal in the mind of its founders to a fully functioning hospital. Along the way MIOT developed from being an orthopaedic centre to one of India's premier multi-specialty hospitals. Donning the mantle of innovator, MIOT introduced computer navigated surgery for knee replacements and promoted patient friendly concepts like keyhole surgery, pinhole surgery and bariatric surgery. Based on its extensive expertise in orthopaedics MIOT launched the Global Centre for the Ideal Joint to develop implants for the Indian anatomy. MIOT also launched 'Joint for Life' in Replacement Surgery. With the MIOT Institute of Research making excellent progress in stem cell research, MIOT continues to fight from the frontlines in the battle against diseases.
